

RYNAUT - FREE TOOL

Should I Accept This AI Output?

HOW TO USE - BUYER GUIDE

Free 7-Gate Decision Flowchart

What this is

A one-page decision framework that turns 'this AI output looks fine' into a defensible, repeatable team standard. It walks any AI-generated output through seven gates - Grounding, Scope, Consequence, Consistency, Bias & Safety, Completeness, and Ownership - and tells you whether to Accept, Revise, escalate to Human review, or Reject.

Who it's for

Engineers, product managers, reviewers, and anyone who approves AI output before it ships to customers, code, or records.

How to run it

1. Open the flowchart in any browser (it is a single HTML file - no install).
2. Start at the top with a specific AI output in front of you.
3. Answer each gate honestly. A 'No' routes you to Revise, Human review, or Reject with a clear reason.
4. Reach the green ACCEPT node only when all seven gates pass.
5. Click 'Save / Print PDF' to keep or share the framework; 'Copy Link' or 'Share on LinkedIn' to distribute it.

How to read your results

The framework is binary by design: every output ends at Accept, Revise, Human review/Hold, or Reject. The colour legend at the bottom maps each outcome. The goal is not to slow you down - it is to make the high-consequence outputs (Gate 3) impossible to auto-ship without a human checkpoint.

How to act on your results

- Use the included AI Output Review Log (CSV) to record each decision - reviewer, the seven gate results, and the final call. That log is your audit trail.
- Pin the printed flowchart where your team reviews AI output.
- For high-consequence systems, pair this with the LangGraph Zero Blast Radius Checklist to design the human checkpoint in code.

FAQ

Q: Do I need an account?

A: No. It is a free static page. Nothing is sent anywhere.

Q: Can I share it with my team?

A: Yes - free to use and share with attribution to Rynaut.

Q: Is this compliance advice?

A: No. It is an educational decision framework, not legal or regulatory advice.
